MANAGING THE RISK OF A SERIOUS HITCHHIKER PEST

Friday 18 June ● **11 am - 12 pm**

The brown marmorated stink bug (BMSB) is a pest that poses a significant biosecurity risk for Australia and New Zealand. A huge effort is undertaken to manage the risk of BMSB arriving in our countries and impacting on our environment and industries.

Learn more about these efforts in our Australian Biosecurity webinar series.

Presenters

Dr Brian Garms

Director, Biosecurity Plant Division, DAWE

What is BMSB and why does it pose such a significant risk for Australia?

Ben Rowntree

Director, Biosecurity Operations Division, DAWE

How Australia manages the seasonal risks posed by BMSB, and the response efforts that are undertaken when it is detected within our borders.

Nathan Reid

Director, Compliance & Enforcement Division, DAWE

The importance of managing BMSB risks offshore, and the offshore treatment provider scheme.

Paul Hallett

New Zealand Ministry for Primary Industries

New Zealand's perspective on the BMSB and how cooperation with Australia is helping manage the growing risks.
